SPECIALIST SERVICES

BATHROOM UNITS

INTRODUCTION

Specialist Services bathroom units are manufactured from fire retardant Glass Reinforced Polyester (GRP).

They are delivered as complete factory-tested units ready for installation. Service connections are made from the corridor side to provide easy access for installation and

maintenance. Units are tested and certified to meet SOLAS and MODU requirements.

Specialist Services units are of the highest quality and are designed and manufactured especially for use in ships and offshore accommodation.

Lightweight

Specialist Services GRP units are less than half the weight of steel units. A typical bathroom unit weighs 250Kg.

Hygienic

GRP units have clean and smooth polished walls. There are no tiles to chip or crack and no grout to harbour dirt and bacteria. Units are easily wiped clean.

Base Tray, Walls and Ceiling

The main components are constructed from fire retardant Glass Reinforced Polyester. Galvanised steel stiffeners are moulded into the construction to provide additional strength. The base tray is a watertight one-piece moulding. All joints are watertight. Flooring is textured non-slip GRP.

Base Frame

Each unit is fitted with a primer-painted, welded, mild steel base frame or moulded GRP legs. Each leg has a levelling screw.

WC

Specialist Services units can be provided with water or vacuum flushing closets. WC's can be flushed by a tank or flush valve. WC bowls are vitreous china and may be floor or wall mounted.

Washhand Basin

The washhand basin is made from vitreous china, GRP or Corian. A pillar mixer tap and pop up waste are fitted as standard.

Shower

The shower tray is 50mm lower than the unit floor, and separated from the rest of the unit by a shower curtain. Showers are fitted with a thermostatic mixer and hand set.

Door

Our units have doors fitted with non-corrosive indicator locks. The doors and frame colour-match the customers wall panel system. A stainless steel door sill with an upstand is provided to

stop water leaking into the cabin. A 20mm gap is left between the door and sill for ventilation.

Model Availability

Standard models are shown in this brochure. Models to suit customers layout and designs can also be manufactured.

Electrical, HVAC and Pipework

Hot, cold and seawater supply lines are fitted with shut off valves. Units are fitted with an IP44 ceiling light. Wiring is terminated at a junction box ready for a single cable connection by the yard. An air extract grille is fitted in the ceiling.

Knock-Down Units

We can supply units in knock-down form for installation where there is restricted access and refits. The components of Specialist Services units are designed to pass through a door opening of 800mm x 2000mm and less if necessary.

Durability

Our GRP units require minimal maintenance and as they are not made of steel, will not rust or corrode. Our units are waterproof and have a life expectancy in excess of 20 years.

Transport & Packing

Units can be delivered in sea containers or crated. Shipping time from Dubai to European and Far East ports is less than 28 days

Colour Selection

Units can be produced in any colour to match customers interior decoration schemes.

Installation

Specialist Services units can be supplied with removable lifting eyes which bolt to the top of the unit. Castor wheels can be fitted to the legs so units can be easily pushed across the deck for installation. Once in place the levelling screws are adjusted and tack welded or glued with epoxy resin to the deck. Installation is quick and easy.
